

Dozens of historical ciphers solved with LLMs

Large language models (Claude Opus 5, Opus 5.5, and Fable 5.1) solved more than forty historical ciphers in September 2026, working autonomously in an agentic setup with prompts designed by Dan Bourdeau (dnbourdeau@gmail.com), a data scientist and AI deployment engineer. Some of those previously unsolved ciphers had been published as public challenges. LLM agents found the others in databases and archives, with other agents handling research and cryptanalysis.

The LLMs recovered 24 keys using ciphertext-only cryptanalytic techniques. The remainder were solved using autonomous surveys of archives and other sources, looking for clues, possible plaintext, or keys published elsewhere.

Summaries of the solutions are listed below, including the primary source (the original document), the secondary source (where the item was found: DECODE, Tomokiyo's cryptiana, Cipherbrain, a library catalog), and a link to the full write-up with transcription, key, and reading. Cases where the key or a decipherment sat next to the ciphertext in the same file are not listed.

Full details and attempts on other ciphers are documented in <https://dbourdeau.github.io/cyphersolver/>

The solutions have been reviewed by Dr. George Lasry (george.lasry@gmail.com), an expert on cracking historical ciphers, who was part of a 2022-23 [project](#) to decipher dozens of encoded letters from Mary Queen of Scots found in the French National Library, and has published more than 30 [articles](#) and a [PhD thesis](#) on the subject.

This project is part of a recent wave of LLM solutions by other researchers (solving [Enigma messages](#), solving a [WWI German](#) cipher), following the introduction of powerful new frontier models in 2026. Lasry and Bourdeau are conducting a meta-analysis of the successes and limitations of current models against historical cipher challenges, based on extensive case studies from Bourdeau's project described here, and other projects. The research questions they are investigating include:

- Are LLMs effective in cracking historical ciphers because they tirelessly do extensive archival research, test hypotheses, look for patterns, and exhaustively look for cipher weaknesses, as humans could do but much faster, or because they are applying superior reasoning and are capable of designing novel sophisticated methods?
- While LLMs are not yet as effective as humans against some categories of cipher problems, is this only a question of time before newer models make human codebreaking redundant? Or are some of the limitations inherent and intrinsic and likely to leave some room (and fun) for human problem solving and codebreaking?

The ciphers are from the 15th to the 20th century. They include:

- **Substitution ciphers** where each letter of the alphabet is replaced by another letter or numerical code, or cipher symbols
- **Homophonic ciphers** where each letter of the alphabet can be encoded with more than one option, e.g., the relatively frequent letter e being replaced by either 20 or 21.
- **Polyphonic cipher**, in which every cipher symbol (or numerical code) may represent more than one plaintext letter, e.g., both e and f being encoded as 9.
- **Transposition ciphers**, in which the positions of letters of the plaintext messages are changed according to a pre-agreed transposition scheme.
- **Nomenclators and codebooks** - with one entry for each word or proper name.

1. Keys recovered from ciphertext only

In all those case studies, the key was rebuilt from the ciphertext alone, with no plaintext and no existing key available. Three items had also been solved earlier by George Lasry but never published; the LLMs solved them independently, and the LLM solutions match the solutions found by Lasry. For more details on the work of the LLM, its methods and steps, and the contents of the deciphered message, see the full write-up in the link provided below.

1. Four cipher letters to Gianfrancesco Gonzaga, lord of Mantua 1428-1430

To Gianfrancesco Gonzaga, lord of Mantua

“... dominus a[rchi]episcopus de Patrasio cum licencia domini nostri dare volebat temporale dominium dominio Venetorum, et illud defenderet ab infidelibus.

Dominus noster fecit proponere cardinalibus. Responderunt melius est perdere quam Venetis tradere, quia una vice recuperabitur; set si Veneti haberent, recuperare nunquam esset possibile ...”

Translation: “... the lord archbishop of Patras wanted, with the leave of our lord [the Pope], to give the temporal lordship to the dominion of the Venetians, which would defend it against the infidels. Our lord had it put to the cardinals. They answered that it is better to lose it than to hand it to the Venetians, because one day it will be recovered; but if the Venetians had it, it could never be recovered ...”

Francesco de' Cattanei, Rome, February 13, 1430

Two keys rebuilt ciphertext-only: Rome, 9 Aug 1428 (96.6%) and Cattanei, Feb 1430 (96.7%). A third letter was re-deciphered from its interlinear gloss. Pandolfo Malatesta's own runs remain open. 91.5% of all signs read.

Method	ciphertext-only break · partial
Primary source	Archivio di Stato di Mantova, Archivio Gonzaga
Secondary source	DECODE R1854 (partially decrypted; catalogued as one letter)
Write-up	https://dbourdeau.github.io/cyphersolver/r1854.html

2. Sienese envoys and others to the government of Siena before 1429 to 1547

To the Signoria of Siena

“Noi aviamo chompr(e)so che questo signiore no chavalcharà per lo modo che chostoro di qui vorevero, e diliverà senza altra presa fare di qui partirsi e d'esare chostà; e crediamo sarà sabato prossimo; e farano la via di Laiatico, e poi di là si partirano, e l'altro di sarano a Radichondoli ...”

Translation: “We have understood that this lord will not ride in the way those here would like, and he will decide, without further halt, to leave here and come to you; we think it will be next Saturday; and they will take the road by Lajatico, and then leave from there, and the next day they will be at Radicondoli ...”

Sienese envoys (unnamed), undated

Keys recovered from the ciphertext alone for three letters (nos. 25, 18, 14) and from an alphabet fragment for a fourth; none of the 43 keys filed with the letters fits. No. 25 reads 96.2%, no. 18 (Latin treaty articles with the Emperor) 87.1%. Several other letters in the file remain open.

Write-up	https://dbourdeau.github.io/cyphersolver/siena1421.html

3. Lope de Soria to Charles V: the key-A letters Genoa, June-July 1523

To Emperor Charles V

“... escriven de Milan como tenian nueva que era arrivato en Venecia un secretario del duque de Milan, el qual avia traído el mandado del Infante para concluir la liga con los venecianos, y que por esto el duque de Milan avia prometido al dicho Infante diez y ocho mil ducados, y que con esto tenian por cierto que se concluiría la dicha liga ...”

Translation: “... *they write from Milan that they had news that a secretary of the Duke of Milan had arrived in Venice, who had brought the Infante's mandate to conclude the league with the Venetians, and that for this the Duke of Milan had promised the said Infante eighteen thousand ducats, and that with this they held it certain that the said league would be concluded ...*”

Lope de Soria, Charles V's ambassador, Genoa, June 1523

Soria used two ciphers in 1523. Key A (the June letter in three copies and the body of the July letter) had no key and no crib; it was broken by simulated annealing on a Castilian language model of the 1520s and read nearly throughout: the Venetian league bought with Milanese money, the French king's expected descent on Italy.

Method	ciphertext-only break · partial · split entry: key A (June and July letters) only

4. Guido Rangone (Venice) to Anne de Montmorency 24 Dec 1529 and 10 Jan 1530

To Anne de Montmorency, Grand Master of France

“... ’l fa instantia [a m]e de ven[i]re al servizio loro ... malissimo satisfato di lui; ha mandato a dirlo al [s]ignore Cesare e farli grande oferte ...”

Translation: “... *he urges [me] to come into their service ... very ill satisfied with him; he has sent to tell Signor Cesare so, and to make him great offers ...*”

Count Guido Rangone, condottiere in French service, Venice, January 10, 1530

A homophonic substitution of about 50 signs for Italian, broken by simulated annealing. Both passages concern Cesare Fregoso. 87.9% of signs read; four short runs are too short to resolve.

Method	ciphertext-only break · partial
Primary source	BnF, français 3070 f. 81 no. 40 and français 3082 f. 42 no. 19 · Gallica fr. 3082 · Gallica Clair. 331 copy

Write-up	https://dbourdeau.github.io/cyphersolver/rangone1530.html

5. Giovan Gioacchino da Passano (attributed), London, to Francis I 15 Mar 1530 (copy heading)

To Francis I, King of France

“... de gli beni del [Cardinale], per quanto si dice, son pervenuti circa DCCC[m] scuti in l'infrascrite partite, cioe: in denari contanti CL[m] scuti; in crediti de so [Cardinale] per [il Re] interditi et poi levati L[m] scuti; per gli frutti de un anno de lo intrate de so [Cardinale] LX[m] scuti; in baghe circa XX[m] scuti; in vasele d'oro et d'argento CCL[m] scuti; in sulectili de casa per el meno CC[m] scuti.”

Translation: “... *of the goods of the [Cardinal], as it is said, about 800 [thousand] scudi have come in, in the items below, namely: in ready money, 150 [thousand] scudi; in credits of the [Cardinal], sequestered by [the King] and then collected, 50 [thousand]; for the fruits of one year of the revenues of the [Cardinal], 60*”

[thousand]; in jewels, about 20 [thousand]; in gold and silver plate, 250 [thousand]; in household furnishings, at least 200 [thousand] scudi."

Giovan Gioacchino da Passano (attributed), French agent,
London, March 15, 1530

An account of Wolsey's wealth: cash, credits, revenues, jewels and plate, Winchester, St Albans and York. A dotted re-transcription made the break possible. 386 of 402 signs read coherently (96.0%).

Method	ciphertext-only break · complete

6. A Bavarian agent to the Dukes of Bavaria: the Pressburg talks c. 1533-34

To the Dukes of Bavaria

“... daraus der Tag zu Pressburg erfolgt ist, dahin auch des [Ferd.] Tail mit grossem Pomp kummen sint, auch volmechtigen Gwalt anzaigt, und sich zu beden Tailn entliche Verträge versehen. Es hat sich aber zutragen, das am Ertag in der Fasnacht von dem türkischen Kaiser ain treffliche Botschaft ankummen ...”

Translation: “... from which the diet at Pressburg followed, whither also [Ferdinand's] party came with great pomp and showed full powers, and on both sides a final treaty was expected. But it came about that on Shrove Tuesday a distinguished embassy arrived from the Turkish emperor ...”

An unnamed Bavarian agent, c. 1533-34

Split entry. 3,150 signs in a homophonic substitution, broken by constrained annealing against German of 1472-1609 on the first run; a faint gloss on the first lines agrees word for word. It reports the Pressburg negotiations between Ferdinand and John Zápolya, a Turkish embassy, and Alvise Gritti. Running German with local errors; person codes open.

Method	ciphertext-only break · partial · split entry: R9416 pp. 3-4 (f. 263) only

Secondary source	DECODE R9416
Write-up	https://dbourdeau.github.io/cyphersolver/kaa4591.html

7. Claude de La Guiche, bishop of Mirepoix (Rome), to Montmorency 22 Nov 1551

To Anne de Montmorency, Constable of France

“... l'ambassadeur de Senes qui estoit icy, lequel est party pour s'en retourner a Senes avec Dom Diego. Et pour ce que ledict Sr cardinal a commencé a vous escrire de ceste affaire, je m'en remettray a ce qu'il vous en escripra. J'entendz que le conte [de] Sainte Fiore est mal satisfait de [l'Empereur?], et que facilement se reduiroit au service du roy ...”

Translation: “... the ambassador of Siena who was here, who has left to go back to Siena with Dom Diego. And since the said Lord Cardinal has begun to write to you of this affair, I will leave it to what he writes you. I understand that the Count [of] Santa Fiora is discontented with [the Emperor?], and would readily come over to the King's service ...”

Claude de La Guiche, Bishop of Mirepoix, French ambassador,
Rome, November 22, 1551

A 406-sign passage with 22 invented signs, broken by permutation annealing. It covers the Count of Santa Fiora, 'mal satisfait' and ready to serve the king on conditions. Seure's Lisbon letters in the same file are left open.

Method	ciphertext-only break · partial

8. Mémoire en chiffre to the connétable de Montmorency 12 Dec 1560

To Anne de Montmorency, Constable of France

“... puis peu de jours [il] s'est faict une assemblee en la ville de Clairac, en Agenois, d'environ deux mil rebelles, [ou] fust arresté et conclut que si le roy envoyoit forces de pardeça, qu'ils se mect[r]oient en deffence, disans qu'ils aiment mieulx mourir les armes en main que si le roy les faisoit executer par ung bourreau.”

Translation: “... a few days ago [there] was held in the town of Clairac, in the Agenais, an assembly of about two thousand rebels, [where] it was resolved and agreed that if the King sent forces to these parts, they would stand on their defence, saying that they would rather die with weapons in hand than be put to death by a hangman on the King's orders.”

An unnamed Catholic gentleman of the Agenais, December 12, 1560

Ten pages in a cursive script: a homophonic substitution with two-stroke units and four word codes, broken from the images alone. It reports on the Protestant rising in the Agenais a week after François II's death. 98.9% of 1,715 cipher words read.

Method	ciphertext-only break · complete

10. Henry of Navarre to Ségur 1585-86

To Jacques de Ségur-Pardaillan, his envoy to the German princes

“... capituler et conclure promptement avec ceux que vous adviserez ... avec le duc Casimir ou par son consentement, et faire la levée la plus grande et la faire marcher ...”

Translation: “... to agree terms and conclude promptly with whomever you think fit ... with Duke Casimir or with his consent, and to raise the largest levy and set it marching ...”

Henry of Navarre, the future Henry IV of France, October 1585

Three figure-cipher letters to the envoy raising a German army. The key, an alphabetical syllabary, was rebuilt by a structured annealer and checked on matched controls. The letters cover Duke Casimir, Clervant's reiters, and the road through the Vivarais.

20. Gottfried van Swieten to Count Cobenzl Bonn, 1757-59

To Count Cobenzl, the Empress's minister at Brussels

“... subsister l'armée du roi y sans qu'il en coûte un sou ... il n'y a pas un officier général entendu à cette armée, excepté le duc de Broglie ...”

Translation: “... to keep the King's army there without it costing a sou ... there is not one capable general officer in this army, except the duc de Broglie ...”

Gottfried van Swieten, Austrian diplomat, Bonn, February 4, 1759

The 1759 table (groups 100-442) was rebuilt ciphertext-only by monotone annealing against French, then corrected by hand. The despatches cover the Gueldre convention and Soubise's army. 96% of 553 groups read.

21. An Orange prince to an officer of the Dutch émigré troops c. 1795

To an officer of the Dutch émigré troops in British pay

“... comme il pourroit arriver entretemps que le général Dundas vous déclarât qu'il cesseroit le payement, ou bien que les troupes devroient se laisser embarquer, il faudroit y souscrire et vous borner uniquement à tâcher d'obtenir [de] pouvoir donner une gratification à ceux qui ne voudroient se soumettre ...”

Translation: “... as it might happen in the meantime that General Dundas should declare to you that he would stop the pay, or else that the troops must let themselves be embarked, you would have to agree to it and confine yourself solely to trying to obtain leave to give a gratuity to those who would not submit ...”

A son of William V, Prince of Orange, c. 1795

Vertical digit pairs from a 6x6 square, recovered by quadgram annealing on the Dutch postscript; the square then read the French page unchanged. The letter concerns General Dundas, pay and embarkation. 94% of cipher tokens read; about thirty word signs open.

22. Cardinal Soglia to nuncio Viale Prelà at Innsbruck Rome, 15 June 1848

To Mgr Michele Viale Prelà, papal nuncio at Innsbruck

“... per nuove sopraggiunte circostanze Le partecipo [...] del Padre che Ella rimanga in Inspruck presso l'Imperatore e ovunque egli fosse per recarsi ...”

Translation: “... because of new circumstances that have arisen, I inform you [...] of the [Holy] Father that you are to remain at Innsbruck with the Emperor, and wherever he may go ...”

Cardinal Giovanni Soglia, Secretary of State to Pope Pius IX, Rome, June 15, 1848

A 64-cell two-digit table with homophones and syllables, 5 as word separator, and an alphabetical one-part code. It is a counter-order: stay with the Emperor and suspend the request for passports. Ten code words read from context; 11 code groups open.

23. Swatow telegram to Sun Yat-sen 3 Apr 1916

To Sun Yat-sen's household in Tokyo (telegraphic address "Rosamonde")

“潮城由莫擎宇獨立。我軍亦光復汕頭。後莫率大隊來，令我退出鎮守府。我軍力薄，暫由翼□支持。文慧返[港].....”

Translation: “Chaozhou city has been declared independent by Mo Qingyu. Our force too has recovered Swatow. Then Mo came with a large body of troops and ordered us out of the garrison headquarters. Our force is weak; for now we are supported by Yi-□. Wenhui is returning [to Hong Kong]”

“Tanaka”, a Japanese with Sun Yat-sen's men, Swatow, April 3, 1916

Standard Chinese telegraph code passed through a systematic code condenser, recovered by brute force. 41 of about 44 characters read.

Method	ciphertext-only break · complete

2. Keys rebuilt from a plaintext found outside the collection

*The key was rebuilt by LLMs, by aligning the ciphertext with a **plaintext** found elsewhere, with extensive, autonomous search in archives, book editions, archive calendars, websites, articles, or the decipherment of another document originally enciphered with the same key.*

25. Giuliano Caprile and Alfonso Cistarelli (Eger, Buda) to the Este 1519-21

To Alfonso I d'Este, Duke of Ferrara

“... li go fato moto deli danari del suo de[b]ito, come mi dise messere [Alfonso].
Lui m'ha resposto, dice [de] voler andar in Italia ... parlaremo a longo sopra ciò
...”

Translation: “... *I have raised with him the money of his debt, as messer
[Alfonso] told me. He has answered me, saying he wants to go to Italy ... we
shall speak at length about it ...*”

Giuliano Caprile, canon of Eger, April 6, 1521

Somogyi's two plaintexts were used as a crib to rebuild the 1520-21 homophonic sign cipher by EM alignment. The key then read in part two letters with no decipherment anywhere (R1139, R1136): the custode and governor of Eger, the late bishop's money.

26. Adrian of Utrecht, the Admiral and the Constable of Castile to Charles V Vitoria, 30 Dec 1521

To Emperor Charles V

“... y agora con este moço el Rey que sucede en aquel Reino, y con que diz que
tiene cabe sí algunos que no le dexan las orejas ociosas, no sabemos la
demostración que querrá hacer; porque como V. M. debe ya tener noticia, los
Reyes de Portugal tienen alianza antigua con los de Francia ...”

Translation: “... *and now, with this youth who succeeds as King [of Portugal],
and who they say has some people about him who do not leave his ears idle, we
do not know what stance he will take; for, as Your Majesty must already know,
the Kings of Portugal have an ancient alliance with those of France ...*”

Adrian of Utrecht, regent of Castile and future Pope Adrian VI, with the Admiral
and the Constable of Castile, Vitoria, December 30, 1521

The ciphertext was transcribed from the images and aligned with the printed decipherment, rebuilding a mixed nomenclator. The rebuilt key read or corrected about 17 of the ~25 groups the print left blank, and showed that the dead king is Manuel I of Portugal, not the print's "Rey de Inglaterra".

27. Hugo de Moncada to Charles V Monaco, 6 Oct 1524

To Emperor Charles V

“... me rogaua que le lleuase a España, diziendome muchas razones para ello. Yo le he respondido que vna vez ponga el exercito de V. Md. en seguro, y que estas galeras no tienen pan ...”

Translation: “... [the Duke of Bourbon] asked me to take him to Spain, giving me many reasons for it. I have answered him that once he has put Your Majesty's army in safety, and that these galleys have no bread ...”

Hugo de Moncada, captain-general of the imperial galleys,
Monaco, October 6, 1524

442 cipher signs were transcribed and aligned with the print by EM, rebuilding a homophonic key with code groups. The key reads the print's gap: Bourbon asked to be carried to Spain in the galleys.

Method	key from external plaintext · complete

31. The Venetian ambassador at Rome to the Doge and Senate 29 Apr 1628

To the Doge and Senate of Venice

“... col Cardinal Barberino di parlargli di quel negotio che lei mi si è commesso con cotesto Eccelso Consiglio, et di cavar anche qualche intimo particolare desiderato da lei, perché due volte nelle capele [papali] e avendomi ricercato con [più] istanza se Palma sarà ben fortificata, quanto presidio aveva, se il passo della Pontebba si era ben assicurato ...”

Translation: “... with Cardinal Barberino, to speak to him of that business which you entrusted to me with that Most Excellent Council, and also to draw out some secret particular that you desired, because twice in the papal chapels, and having asked me with [more] insistence whether Palma will be well fortified, how large a garrison it had, whether the pass of the Pontebba had been well secured ...”

The Venetian ambassador, Rome, April 29, 1628

R1874's decipherment (~4,800 letters) was aligned with its cipher by EM to give a syllabary grid, which reads this Rome despatch unchanged. 1,280 groups transcribed; 99.1% have a value. Cardinal Barberini asks whether Palmanova is fortified and the Pontebba pass secured.

32. Fra Giovanni di Lucca to Ferdinand III 30 May 1644

To Emperor Ferdinand III

“Al principe di Transil[u]ania lo impedirò con ogn[i] modo che il Turco non li dia aiuto, e farò rivoltare contra di lui, se sarà bisogno, il principe di Bog[o]dania, et li

darò dumilia Cosachi, et manderò a voi con una sua lettera all'Imperatore che non faccia pace fin che non l'habbi humiliato o vinto."

Translation: "As to the Prince of Transylvania: I shall by every means prevent the Turk from giving him help, and if need be I shall make the Prince of Moldavia rise against him and give him two thousand Cossacks, and I shall send [him] to you with a letter of his to the Emperor, that he make no peace until I have humbled or defeated him."

Fra Giovanni di Lucca, reporting the words of Grand Hetman Stanisław Koniecpolski, Brody, May 30, 1644

Eight crib letters fixed from Tomokiyo's opening seeded an annealer that found a 24-figure Italian alphabet (all seeds agreeing, shuffled controls failing). Read in full: Grand Hetman Koniecpolski offers to keep the Turk off Rákóczi and supply 2,000 Cossacks.

Write-up	https://dbourdeau.github.io/cyphersolver/feuquieres.html

34. John Armstrong to James Madison, coded postscript 1808

To James Madison, Secretary of State

"Russel ought to be the consul: he is an American by birth, and is much better qualified than any other candidate. In a word, he is above men in general. Next to him in fitness is O'Mealy, but he is, like Warden, an Irish[man]."

John Armstrong, United States Minister to France, Bourbon-l'Archambault, August 30, 1808

A 580-group code table (the "THE = 972" code) was rebuilt from the clerk's decodes in another archive, with the remaining groups inferred from their alphabetical slot. It reads 48 of the postscript's 49 groups; the 49th is a probable slip for "man".

Method	key from external plaintext · complete

39. Bordeaux to Brienne (Thurloe intercept) London, 30 May 1653

To the Comte de Brienne, Secretary of State for Foreign Affairs

“Ce n'est pas que si nos affaires estoyent plus florissantes nous n'eussions sujet de
tesmoi[g]ner quelque mescontentement de la reception qui a esté faite aux
deputez de Bordeaux. Ils ont esté entendus par deux commissaires du Conseil, et
l'audience que j'avois demandée au General ne me fut donnée qu'après la leur ...”

Translation: “Not that, were our affairs more flourishing, we would lack cause to
show some displeasure at the reception given to the deputies of Bordeaux. They
were heard by two commissioners of the Council, and the audience I had asked
of the General [Cromwell] was not granted me until after theirs ...”

Antoine de Bordeaux-Neufville, French envoy in England, London, May 30, 1653

After a ciphertext-only solver failed on a faulty transcription, the key sheet was found and fitted:
alphabetical syllabaries in three marked series. With 21 transcription corrections the despatch
reads: the Council hears the Bordeaux (Ormée) deputies before Cromwell receives the envoy.

Method	external key matched · complete

4. Easier cases: key or plaintext found elsewhere in the same collection

The matching key or plaintext came from the same collection (another volume or fonds, no link recorded before), but had not been previously associated with the unsolved ciphertext.

42. Lope de Soria to Charles V: the key-B letters Genoa, Jul-Aug 1523

To Emperor Charles V

“Andrea Doria y el principe de Salerno estan muy descontentos del rey, porque les avia quitado la enpresa de esta ciudad y la avia dado al bastardo de Saboya; y a me [hablado] uno que se dize Jeronimo Doria, que es uno de los principales de esta ciudad, de parte del dicho Andrea Doria, y dizen que si V. Mag. [quiere] aceptar en su servicio al dicho Andrea Doria con sus quatro galeras, que el lo servira de muy buena voluntad ...”

Translation: “*Andrea Doria and the Prince of Salerno are very discontented with the King [of France], because he had taken from them the enterprise of this city and had given it to the Bastard of Savoy; and one who calls himself Jeronimo Doria, one of the leading men of this city, has [spoken] to me on behalf of the said Andrea Doria, and they say that if Your Majesty [will] take the said Andrea Doria into your service with his four galleys, he will serve you very willingly ...*”

Lope de Soria, Charles V's ambassador, Genoa, August 13, 1523

Key B was rebuilt by aligning R9844 with its decipherment; the key-B letters read in substance (Siena, Beaurain, money for Swiss to descend on France, Andrea Doria). The earlier key-A letters were broken ciphertext-only and are listed in section 1.

Method	key from external plaintext · partial · split entry: key B (from late July) only
Primary source	Real Academia de la Historia, Colección Salazar y Castro A-28 (9/28)
Secondary source	DECODE R9491-R9498
Key or plaintext from	The court's decipherment of another Soria letter (30 Dec 1523) in a different volume of the same collection, Salazar A-30 (DECODE R9844)
Why borderline	same collection and correspondent, different volume

43. Duke of Sessa to Charles V Feb-Apr 1523

To Emperor Charles V

“... Su Santidad por esta bula es declarado contra Francia ...”

Translation: “... *His Holiness, by this bull, stands declared against France ...*”

Luis Fernández de Córdoba, Duke of Sessa, Charles V's ambassador,
Rome, April 26, 1523

The key was recognised by recurring code groups and applied unchanged. Mostly already in print; the two uncalendared despatches (R9660, R9665) read in part.

Method	external key matched · partial
Primary source	Real Academia de la Historia, Colección Salazar y Castro A-27 (9/27)
Secondary source	DECODE R9660-R9666
Key or plaintext from	The Sessa key this project rebuilt from the court's decipherments in another volume of the same collection (Salazar A-31); four of the letters are calendared in CSP Spain ii (1866) · BHQ
Why borderline	same collection and correspondent, different volume

44. András Bay to Ferenc Rákóczi II Iași, 8 Mar 1706

To Ferenc Rákóczi II, Prince of Transylvania

“... tudván az barát az Portának szemének és fülének lenni, még nem mondotta ...
lelkemre kötötte, hogy ki ne adjam őtet. A svéd Vilnához szállott ...”

Translation: “... knowing the friar to be the eyes and ears of the Porte, he has not
yet told it ... he charged me on my soul not to give him away. The Swede has
taken up quarters at Vilna ...”

András Bay, Rákóczi's envoy at the court of Moldavia, Iași, March 8, 1706

The key reads the letter unchanged (97.6% as sense) after seven transcription corrections:
Muscovite and Polish envoys at the Moldavian court, the Tsar suing Charles XII for peace.

Method	external key matched · complete
Primary source	MNL OL, G15 Caps. D. Fasc. 81. 5
Secondary source	DECODE R478 (non-decrypting)
Key or plaintext from	Rákóczi's syllabic key, G15 Caps. C. Fasc. 43. 56 (DECODE R609), picked by scoring all 94 G15 key transcriptions against the letter
Why borderline	same fonds (G15), different caps; no link recorded before

45. Philippe Groffey (?) to Ferenc Rákóczi II (alias Pompeo Csoni) 15 Oct 1707

To Ferenc Rákóczi II (addressed as “Monsieur Pompeo Csoni”)

“... assurant qu'elle avoit dit que, prenant les intérêts de la Pologne autant à
cœur que ceux de la Hongrie, elle estoit résolue de se sacrifier elle-mesme s'il le
falloit pour affranchir la liberté polonoise opprimée par les Suédois en faveur du
Roy Stanislas.”

Translation: “... asserting that [Your Highness] had said that, taking the
interests of Poland as much to heart as those of Hungary, [you] were resolved to
sacrifice [yourself] if need be to free Polish liberty, oppressed by the Swedes in
favour of King Stanislas.”

Philippe Groffey (?), Rákóczi's agent, October 15, 1707

The key identifies 1,020 of 1,108 groups (92.1%), validated on two interlined siblings; the
catalogue's direction is reversed (Rákóczi is the recipient). Ráday's letters to Rehnskiöld, Polish
liberty oppressed in favour of King Stanisław.

Method	external key matched · partial
Primary source	MNL OL, G15 Caps. C. Fasc. 39 pp. 277-279

46. Letters to Ferenc Rákóczi II (Poland and Danzig) Oct-Nov 1707

To Ferenc Rákóczi II

“... ni perdre de vue les affaires generales de l’Europe. Aussi publie-t-on comme une chose presque certaine qu’il n’entrera en Moschovie que la campagne qui vient.”

Translation: “... nor lose sight of the general affairs of Europe. So it is given out as an almost certain thing that he [Charles XII] will not enter Muscovy until the coming campaign.”

An unsigned correspondent at the King of Sweden's headquarters,
November 5, 1707

R912 and R922 keyed at 97.4% of 2,352 groups: Stanisław, Charles XII, the Tsar, Rehnskiöld. The other two letters of the group were read from their own clear copy and interlinear decipherment and are not counted here.

Method	external key matched · complete
Primary source	MNL OL, G15 Caps. C. Fasc. 39
Secondary source	DECODE R912 , R922 (catalogued as Rákóczi to unknown recipient)
Key or plaintext from	The same Bonac-Groffey key, G15 Caps. C. Fasc. 44/o8 (DECODE R639)
Why borderline	same fonds (G15), different fascicle

47. London to Johann Georg von Ilten Feb-Apr 1743

To Johann Georg von Ilten, Hanoverian lieutenant-general in the Low Countries

“Cependant on souhaite que les troupes consomment ... ce qu’il y a de fourrage dans ces quartiers, afin qu’il n’en reste rien si l’envie prenoit aux François de vouloir prendre quartier après vous dans ce pays là, de sorte qu’ils n’y trouveroient point ni fourrage ni rien de ce qui seroit necessaire pour la subsistance des troupes.”

Translation: “Nevertheless it is wished that the troops should consume ... whatever forage there is in these quarters, so that none is left should the French take a fancy to quarter in that country after you, so that they would find there neither forage nor anything needed for the subsistence of the troops.”

An unsigned writer, on George II's orders, London, February 15/26, 1743

The code table was matched to the letters through the worksheet values of one of them and reads both: 220 of 223 groups. The King approves the forage instructions so the French find none; an extract of Lord Stair's instructions.
